Benefits of the 50 Man Camp

Financial Benefits:

Modular prefabricated facilities are cost effective solutions for urgent remote site requirements, particularly for pandemic related requirements.

Facilities can remain in location for the long term or be uplifted and relocated once the pandemic has passed.

Sustainability Benefits:

Standard facilities are largely constructed from recyclable materials. A high emphasis is placed on thermal insulation to reduce energy costs, with optional packages available for solar water heating, hybrid solar/diesel power generation and solar power generation with battery storage.

Quality Benefits:

Prefabricated units are manufactured in a high-quality factory in Turkey, in accordance with international quality and safety standards, including ISO 9001:2015, ISO 14001:2015, OSHAS 18001:2014, and EN 1090-2 EXC2.2.

Installation is carried out in accordance with ISO 9001:2015 and ISO 14001:2015 quality standards.

Benefits of the 50 Man Camp

Technical Benefits :
prefabricated facilities
are purpose
designed, supplied
and constructed with
high quality materials
that have a proven
capacity to withstand
the most extreme
environments.

This results in robust facilities that can provide long service life in one location or be relocated should the need arise.
